What has the team accomplished since the last time you met with the instructional team?

Since our last meeting with the instructional team, we've made solid progress on the project. We updated the GHI boundary shapefile by removing areas that the client asked us to exclude, like the Green Ridge House, the apartments west of Crescent Road, and the Franklin Park Apartments. We shared this updated map with our client through email since we didn't hold a formal meeting this week, and they let us know they'd review it soon. We also started building the web portal for the project, with me (Ruchir) and Ibrahim leading that part. On top of that, we began looking for census and demographic data that applies to the GHI area to possibly include in our map later on.

What is the team hoping to accomplish in the next two week sprint?

Over the next two weeks, our team is hoping to make more progress on a few key things. We want to keep working on the web portal and make sure it's easy to use and gives helpful information to the community. Once we hear back from the client, we'll use their feedback to fine-tune the shapefile. We also plan to keep looking into the census data and figure out how to add it to our project. Lastly, we're trying to fix some issues with how we share files and documents so everyone on the team has access to what they need.

What barriers or challenges has the team encountered?

We've run into a few challenges recently. Some team members haven't been able to open certain files, which has slowed things down and caused a bit of confusion. We're working on improving communication and making sure everyone is on the same page. We've also had a few tech issues with ArcGIS, which has made mapping harder for some of us. Even with these bumps in the road, we're staying focused and continuing to support each other to keep the project moving forward.
